This Discussion Paper is issued under the auspices of the Centre's research programme in **FINANCIAL ECONOMICS, INDUSTRIAL ORGANIZATION, INTERNATIONAL MACROECONOMICS, INTERNATIONAL TRADE, LABOUR ECONOMICS and PUBLIC POLICY**. Any opinions expressed here are those of the author(s) and not those of the Centre for Economic Policy Research. Research disseminated by CEPR may include views on policy, but the Centre itself takes no institutional policy positions.

The Centre for Economic Policy Research was established in 1983 as a private educational charity, to promote independent analysis and public discussion of open economies and the relations among them. It is pluralist and non-partisan, bringing economic research to bear on the analysis of medium- and long-run policy questions. Institutional (core) finance for the Centre has been provided through major grants from the Economic and Social Research Council, under which an ESRC Resource Centre operates within CEPR; the Esmée Fairbairn Charitable Trust; and the Bank of England. These organizations do not give prior review to the Centre's publications, nor do they necessarily endorse the views expressed therein.

These Discussion Papers often represent preliminary or incomplete work, circulated to encourage discussion and comment. Citation and use of such a paper should take account of its provisional character.

CEPR Discussion Paper No. 5873

October 2006

ABSTRACT

What Has Mattered to Economics Since 1970*

We compile the list of articles published in major refereed economics journals during the last 35 years that have received more than 500 citations. We document major shifts in the mode of contribution and in the importance of different sub-fields: Theory loses out to empirical work, and micro and macro give way to growth and development in the 1990s. While we do not witness any decline in the primacy of production in the United States over the period, the concentration of institutions within the U.S. hosting and training authors of the highly-cited articles has declined substantially.

JEL Classification: A11, B20 and O33

Keywords: citations and innovations in economics

Submitted 30 August 2006

Citations are one way that past research echoes through time. Although the number of academic citations accumulated by a published research paper is an imperfect measure of quality or influence of that paper, citation counts do have certain virtues. They are not subjective. They are widely used in studies of academic productivity. They are reasonably comprehensive across subject areas within economics. In this paper, we compile a list of articles published in major refereed economics journals in the last 35 years that have received more than 500 citations as of June 2006. We then use this list to examine various trends: what economics fields and types of articles are most in vogue and which institutions host their production and train their authors.

How We Compiled the List

For each article published in 41 prominent economics journals between 1970 and 2002, we download citations as of June 2006 from the ISI Web of Science/Social Science Citation Index. We limit our focus to 41 journals because the Web of Science has an untenable list of 175 economics and 40 finance journals. The choice of the particular 41 journals results from the union of journals which have been used in previous studies ranking economics and finance departments and individual economists. These ranking studies, summarized in Kim, Morse, and Zingales (2006), include Arnold, Butler, Crack, and Altintig (2003), Coupe (2003), Dusansky and Vernon (1998), Graves, Marchand, and Thompson (1982), and Scott and Mitias (1996). Table 1 shows the list of 41 journals.

Our objective is to prepare a list of the articles in these journals with more than 500 cites. To do so, we make an adjustment to the downloaded citation counts to restore

omitted citations resulting from references that contain erroneous information or omit necessary information to generate a citation in the main record of the article. For example, if an issue number is omitted or incorrectly referenced, the base article may not receive credit for that citation. To ensure such underestimation does not prevent deserving articles from making the list, we identify all papers with 400 or more correctly referenced cites. Then we apply a manual count procedure. We search the cited reference database for the author last name, first initial, and year for each of 198 articles receiving more than 400 cites. When we find a citation without a linkage, we identify the appropriate article deserving the citation following a set of rules designed to minimize misidentification.¹

The List

Table 2 presents the resulting list of 146 articles with over 500 cites as of June 2006. The most cited article, with 4,318 cites, is Halbert White's paper on robust standard errors, followed by Daniel Kahneman and Amos Tversky's paper on prospect theory (4,085

¹ If an individual has only one article for a specific journal and year, all misreferenced citations that have the correct journal and year are credited to the article. If the individual has multiple articles in the journal for the year searched, we credit all cites with the correct issue or page number to the appropriate article. For the remaining misreferences for individuals with multiple papers in the same journal year, we calculate the ratio of correct citations between the multiple articles and apply the ambiguous cases in the same proportion. These rules, however, do not capture misreferences when the last name of the author is incorrectly spelled. Because it is unlikely that the last names of all authors of a co-authored article are misspelled, we follow the same procedure used above for each co-author for each article and use the largest number of misreferenced citations as the add-on to the count. Although this procedure does not capture misspellings of the last name for solo authors, the probability of omitting an over-500-cite, solo-authored article from the list is negligible because solo authors are the focal point of references. Finally, we miss citations when the year of publication is wrong, which is rather rare.

cites) and Michael Jensen and William Meckling's paper on managerial behavior and agency costs (3,923 cites).

Within these 146 papers, an elite group of 11 economists authored or co-authored at least three papers. Robert Barro, Eugene Fama, and Joseph Stiglitz have six each. Michael Jensen follows with five; Robert Lucas and David Kreps with four; and Robert Engle, Lars Hansen, Robert Merton, Edward Prescott, and Stephen Ross have three each.

What Has Mattered to Economics

This list of highly cited papers provides us with an opportunity to analyze what has mattered in economics over the last 35 years. To make comparisons over time, however, we need to correct an obvious bias: papers written in the 1970s are more likely to meet the 500 cites threshold than papers written in the 1990s. In fact, Table 2 contains 69 articles from the 1970s, 58 from the 1980s, and only 19 from the 1990s with just one after 1993. To make the comparison meaningful we lower the bar for papers written in the period 1985-1999. During the first three half decades (1970-1984), the number of over-500-cite articles hovers around 35 per half decade. Hence for the following three half decades, we compile 35 most cited papers for each half decade.²

² To identify the additional highly cited papers we manually correct for misreferences as described earlier. We do not include papers written after 2000 because the time span is too short for references to be meaningful.

To identify fields represented by these highly cited papers, we collect the JEL code for each of the articles by looking up the reference in EconLit and recording the first JEL code listing. We condense the two-digit JEL scheme into 11 fields, generally adhering to the JEL aggregate fields.³

As Table 3.A shows, econometrics and finance are well represented throughout the period with a constant flow of highly cited papers capturing about 20% and 23%, of the most cited papers respectively. Micro and macro have a relatively prominent presence during the 1970s and the 1980s (18% and 17%, respectively), but both experience a sharp decline in the 1990s (only 9% for each). In contrast, growth/development, which makes the list only once during the 1970-1984 period, explodes in the subsequent three half-decades with shares of 14%, 20%, and 17% for these periods.

When we look at the type of contribution (Table 3.B), roughly one quarter of the most cited papers in each decade are econometric methodological contributions. With the exception of the early 1970s, this share is very constant over time. By contrast, we observe a major reversal between theoretical and empirical papers. In the early 1970s, 77% of the most highly cited papers were theoretical, while only 11% empirical. At the end of the century, 60% are empirical and only 11% theoretical. This change in theory's share might be due, at least in part, to different citation patterns for empirical and theoretical papers, with theory starting out slowly but maintaining a longer staying power. However, even when we look at the 1990-94 period, which allows papers to have

³ The 11 fields are econometrics (C except game theory), microeconomics (D), game theory (C7), macroeconomics (E), international economics (F), finance (G), public finance (H and I), labor (J), industrial organization (L), growth and development (O and P) and others (K, M, Q, and R). For a few cases without JEL codes, we applied our assessment of the article. We recoded JEL codes for two cases in which the coding was clearly not the primary subject.

at least 12 years to accumulate cites, we still find a similar albeit less accentuated trend; theory represents 40% of the papers and empirics 31% during this period.

As for the publication outlet for the most cited papers, Table 4 shows sharp changes over time. In the 1970s and 1980s, the lion's share of these papers was published in *Econometrica* (22.3%), the *Journal of Political Economy* (18.0%), and *American Economic Review* (14.4%). Particularly noteworthy is *Econometrica's* contribution in the 1980s, peaking at nearly one-third of the articles over the decade. In the 1990s, the honor belongs to the *Quarterly Journal of Economics* (21.4%), the *Journal of Political Economy* (15.7), the *Journal of Finance* (14.3%), *Econometrica* (12.9%), and the *American Economic Review* (8.6%). Considering that the *QJE's* share was only 4.3% in the earlier period, its ascent to the position of the primary outlet for most-cited papers is remarkable.

As Table 5.A shows, eighty-five percent of the most cited papers are written by researchers when they were working at U.S. institutions. This share does not exhibit any decline over time; in fact, it slightly increases in the last five years. Within the United States, however, the concentration declines substantially. In the 1970-74 period, almost one fourth of the most cited papers were written at the University of Chicago and only 15 institutions were represented at all. At the end of the century, however, no institution accounts for more than 16% of the market, and an impressive 26 institutions contribute to the production of highly-cited articles. The within-U.S. Herfindahl index of

concentration⁴ declines 50% from a score of 0.096 in the early 1970s to 0.062 in the late 1990s.

This reduction in concentration within the United States is consistent with Kim, Morse, and Zingales (2006), who document a significant reduction in the local spillover (university fixed effect) of academic productivity over the last three decades. It does raise an interesting question, however: Why is this spreading out limited within the United States without benefiting Europe or the rest of the world?

The same pattern emerges if we look at where the writers of the most cited papers were trained (Table 5.B). An overwhelming majority, 87%, received their PhDs from U.S. institutions, with this percentage rising to 93% at the end of the century. As for the location within the United States, however, the concentration of the institutions granting PhDs to the authors of these papers has declined. In the early 1970s, Chicago trained 28% of the authors and 72% were trained in the top 5 schools. By the end of the century, no institution trained more than 18% of the authors, and the share of the top five has dropped to 51%.

Discussion

In closing, it should be noted that our list of most-cited articles is by no means intended to represent all seminal contributions in economics. Not only does it exclude foundation books such as Adam Smith's *The Wealth of Nations* (1776) and Karl Marx's *Das Kapital* (1867), it also omits all pre-1970 papers that have received vast numbers of

⁴ The Herfindahl index is calculated as the sum of the participants' shares squared.

citations such as the Coase (1937) paper, Friedman's 1967 AEA presidential address, the Modigliani and Miller (1958) irrelevance paper, and so on. To help in understanding what the list covers and what it does not, it is useful to spell out some of the consequences of the choices we made in compiling the list.

The 41 journals that we searched rely primarily on a blind refereeing process, and therefore, journals in which many or all of the papers are invited were omitted. Thus, our list of articles omits the *Journal of Economic Literature* and the *Journal of Economic Perspectives*. Nor does the list include popular economic series such as the *Carnegie-Rochester Conference Series on Public Policy*, the *NBER Macro Annual*, and the *Brookings Papers on Economic Activity*.

We suspect that adding additional journals would result in only modest changes to the list. Among the articles excluded due to our choice of economics journals, one of the most likely papers to hit the 500-cites threshold is the Robert Lucas (1977) paper on business cycles that presented the rational expectations "Lucas critique" and appeared in *Carnegie-Rochester Conference Series*. However, this paper has, by our count, 491 cites and thus would not (yet) have made the list. Our list of journals also excludes the *Journal of Economic Behavior and Organization*, which published "Toward a Positive Theory of Consumer Choice" by Richard Thaler (1980) that would have made our cut with 631 citations. Because we are reluctant to fish in all other social science fields that make interdisciplinary contributions to economics, we exclude non-economic journals such as *Marketing Science*. Unfortunately, that is where Thaler (1985) published "Mental Accounting and Consumer Choice," which has had 541 citations.

We also exclude citations to the working paper version(s) of published papers. Published articles usually have multiple working paper versions in different years, often with different titles. The underestimation from ignoring working papers is likely to be small and roughly similar across papers. The exceptions are papers like the 1985 term structure article by Cox, Ingersoll, and Ross that took almost ten years to publication. The Web of Science has approximately 90 citations to different working paper versions under Cox's name. The published version has 819 citations, implying that the omission of citations to working paper is 10% even in this extreme case.

Finally, the Web of Science database includes citations from all social science fields – not just citations from economics journals. We do not restrict citations to those from economics journals alone because a paper's spillover to other disciplines may be an important part of its impact.

These caveats notwithstanding, our study has shown which papers have had the most impact on our profession and how demands for different subfields and modes of research have changed over time. It will be interesting to look again, a few years from now, to see what articles join the list and what new patterns emerge.

Table 2: List of 1970-2005 Articles Receiving More than 500 Cites

The list contains all articles published in 41 established refereed economics journals during 1970-2005 receiving more than 500 cites in the Web of Science/Social Science Citation Index, corrected for misreferencing errors. The list is current as of June 2006. Adjustment for misreferencing is done by manually counting the citations listed in the Web of Science for all articles with over 400 cites in the primary cite record.

Table 3: Percent of Highly-Cited Articles by Sub-Field and Contribution Type over Half-Decades

Panel A

This panel presents the percentage of highly-cited articles published in each economic field by half-decade. Economic fields are assigned according to the one-digit JEL code as reported in the EconLit reference for each article, with a few exceptions. We allow game theory (JEL classification C7) to be its own field. Development (P) and growth (O) are combined. The “Other” category contains law and economics (K), business administration (M), agricultural, resource and environmental economics (Q), and urban, rural and regional economics (R). For a few cases with no JEL codes, we applied our assessment of the article. We recoded JEL codes for two cases in which the coding was clearly not the primary subject. JEL one-digit categories not listed below are not found in the data. The counts of articles for each field and half-decade are in parentheses.

<i>Economic Field (JEL primary code)</i>	<i>1970- 1974</i>	<i>1975- 1979</i>	<i>1980- 1984</i>	<i>1985- 1989</i>	<i>1990- 1994</i>	<i>1995- 1999</i>	<i>Total</i>
Econometrics (C) (except C7)	10.0% (3)	20.5% (8)	20.0% (7)	22.9% (8)	17.1% (6)	22.9% (8)	19.14% (40)
Game Theory (C7)	--	--	5.7 (2)		5.7 (2)		1.91% (4)
Microeconomics (D)	26.7 (8)	15.4 (6)	22.9 (8)	11.4 (4)	17.1 (6)		15.31% (32)
Macroeconomics (E)	10.0 (3)	20.5 (8)	22.9 (8)	14.3 (5)	5.7 (2)	11.4 (4)	14.35% (30)
International Economics (F)	3.3 (1)	--	2.9 (1)				0.96% (2)
Finance (G)	20.0 (6)	25.6 (10)	20.0 (7)	22.9 (8)	20.0 (7)	31.4 (11)	23.44% (49)
Public Economics (H)	6.7 (2)	2.6 (1)	--	2.9 (1)			1.91% (4)
Labor (J)	6.7 (2)	2.6 (1)	2.9 (1)		5.7 (2)		2.87% (6)
Industrial Organization (L)	10.0 (3)	7.7 (3)	2.9 (1)	11.4 (4)	2.9 (1)	8.6 (3)	7.18% (15)
Growth/Development (O,P)	--	2.6 (1)	--	14.3 (5)	20.0 (7)	17.1 (6)	9.09% (19)
Other (K,M,Q,R)	6.7 (2)	2.6 (1)	--		5.7 (2)	8.6 (3)	3.83% (8)
Observations Total	30	39	35	23	20	27	209

Panel B

This panel presents the percentage of highly-cited articles whose primary contribution is in econometric methodology, empirical results, survey, theory and experiments by half-decade. The grouping is based on the authors' collective familiarity with the articles or a quick reading of articles. The counts of articles for each contribution type and half-decade are in parentheses.

<i>Main Contribution</i>	<i>1970-1974</i>	<i>1975-1979</i>	<i>1980-1984</i>	<i>1985-1989</i>	<i>1990-1994</i>	<i>1995-1999</i>	<i>Total</i>
Methodological	6.7% (2)	28.2% (11)	28.6% (10)	28.6% (10)	22.9% (8)	22.9% (8)	23.4% (49)
Empirical	13.3 (4)	10.3 (4)	11.4 (4)	25.7 (9)	31.4 (11)	60.0 (21)	25.4 (53)
Survey	3.3 (1)	--	2.9 (1)	--	2.9 (1)	5.7 (2)	2.4 (5)
Theoretical	76.7 (23)	61.5 (24)	57.1 (20)	42.9 (15)	40.0 (14)	11.4 (4)	48.7 (100)
Experimental	--	--	--	2.9 (1)	2.9 (1)	-	1.0 (2)
Observations Total	30	39	35	35	35	35	209

Table 4: Percent of Highly-Cited Articles in Each Journal by Half-Decade

Presented is the percentage of highly-cited articles by Journal for each half-decade. The counts of articles for each journal and half-decade are in parentheses.

<i>Journal</i>	<i>1970-1974</i>	<i>1975-1979</i>	<i>1980-1984</i>	<i>1985-1989</i>	<i>1990-1994</i>	<i>1995-1999</i>	<i>Total</i>
American Economic Review	20.0% (6)	7.7% (3)	14.3% (5)	17.1% (6)	5.7% (2)	11.4% (4)	12.4% (26)
Bell Journal of Economics	10.0 (3)	2.6 (1)	2.9 (1)				2.4 (5)

Review of Economics and Statistics	3.3 (1)	2.6 (1)					1.0 (2)

Table 5: Institutional Breakdown of Highly-Cited Articles by Half-Decade**Panel A**

This panel shows the percentage breakdown of institutions in which the authors resided during the time of writing the highly-cited articles. We take the institutional affiliation lagged back two years from the publication year to account for the publishing process time. The affiliations are weighted by the number of coauthors on each article.

<i>Hosting Institution</i>	<i>1970-1974</i>	<i>1975-1979</i>	<i>1980-1984</i>	<i>1985-1989</i>	<i>1990-1994</i>	<i>1995-1999</i>	<i>Total</i>
MIT	13.3%	9.8%	2.9%	8.3%	8.4%	3.5%	7.6%
Harvard	2.8	--	--	4.9	15.2	15.9	6.3
Total Cambridge	16.1	9.8	2.9	13.2	23.6	19.4	13.9
University of Chicago	23.3	21.2	18.6	9.8	16.2	11.2	16.7
Northwestern	--	--	5.7	1.5	3.9	4.0	2.5
Total Chicago	23.3	21.2	24.3	11.2	20.1	15.1	19.2
Stanford	4.4	5.1	5.7	9.5	3.7	1.5	5.0
Berkley	3.3	4.3	2.9	2.9	5.4	--	3.2
Total Bay Area	7.8	9.4	8.6	12.5	9.1	1.5	8.2
Rochester	3.3	6.4	12.9	4.4	4.4	--	5.4
Yale	1.7	4.7	1.4	8.6	9.1	2.0	4.6
University of Pennsylvania	--	5.1	4.3	--	3.4	8.9	3.7
Carnegie-Mellon	6.7	--	10.0	4.4	--	2.5	3.8
Princeton	5.0	1.3	1.4	4.4	3.9	1.5	2.8
Total Mid-Atlantic Area	16.7	17.5	30.0	21.8	20.9	14.9	20.3
Rest of the US	21.1	22.2	20.0	27.4	11.8	38.7	23.5
England	10.0	4.5	7.1	0.7	6.6	3.0	4.7
Rest of Europe	3.3	10.3	2.9	7.3	3.9	1.5	5.0
Rest of the World	1.7	1.3	4.3	5.9	2.5	6.0	3.6

Panel B

This panel shows the percentage breakdown of Ph.D. granting institutions for the authors contributing to the highly-cited articles.

<i>Ph.D. Institution</i>	<i>1970-1974</i>	<i>1975-1979</i>	<i>1980-1984</i>	<i>1985-1989</i>	<i>1990-1994</i>	<i>1995-1999</i>	<i>Total</i>
MIT	15.6%	12.8%	13.8%	13.6%	16.7%	18.0%	15.1%
Harvard	18.8	8.5	20.7	8.5	13.3	18.0	14.5
Total Cambridge	34.4	21.3	34.5	22.0	30.0	36.1	29.7
University of Chicago	28.1	17.0	12.1	15.3	15.0	11.5	15.5
Northwestern	6.3	--	--	--	3.3	--	1.3
Total Chicago	34.4	17.0	12.1	15.3	18.3	11.5	16.7
Stanford	3.1	12.8	6.9	10.2	11.7	1.6	7.9
Berkley	3.1	--	3.4	1.7	5.0	1.6	2.5
UCLA		2.1	3.4	1.7		1.6	1.6
Total California	6.3	14.9	13.8	13.6	16.7	4.9	12.0
Carnegie-Mellon	0.0	4.3	0.0	8.5	3.3	4.9	3.8
Princeton		6.4	3.4	1.7	1.7	6.6	3.5
Yale		4.3	5.2	1.7	3.3	3.3	3.2
Cornell		4.3		1.7	3.3		1.6
University of Rochester		2.1	3.4		3.3	1.6	1.9
Total Mid-Atlantic	0.0	17.0	12.1	5.1	11.7	11.5	10.1
University of Michigan	3.1		1.7	5.1	1.7	1.6	2.2
University of Wisconsin	3.1	6.4	0.0	1.7	0.0	3.3	2.2
Washington Univ St Louis					5.0	1.6	1.3
Iowa State		4.3		3.4			1.3
Total Other Midwest	6.3	10.6	1.7	10.2	6.7	6.6	6.9
Rest of the US	6.3	6.4	10.3	13.6	8.3	23.0	12.0
